

We provide a fun, easy to use platform game for gamers and learners of languages

We like to think we have a little something for everyone here. Whether you are a first-time gamer to the Pokémon series, seasoned veteran, or game enthusiast, we think that there's a lot to gain in this gaming experience.

Pokémon Text Adventure is completely free to use, and will be available exclusively for PC users. Ports to other operating systems is a possibility.

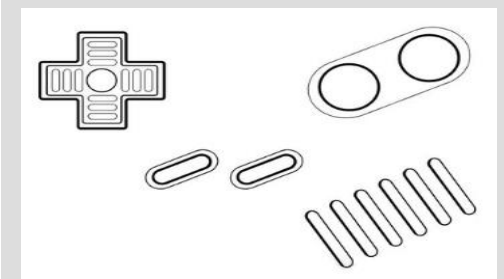

**"Pokémon Gaming
made fun and easy."**

About Pokémon Text Adventure

Pokémon Text Adventure is a Java based game created by a team of students at FHSU who want to provide gamers a unique experience in gaming. We pledge to continue to keep the needs and feedback of the gaming community and clients first.

We've already gotten started on some really exciting features which we think you'll love. In the future, we hope to integrate more languages, all 151 Pokémon from the first generation, text to speech, multiplayer support, and a possible sequel.

Goals

Whether you are looking for an entertaining place to game, working in an academic environment, or simply trying to learn the basics, we will add the features and support while providing open source community to have you covered.

What makes us different?

- Direct swap between languages
- Reusability of design for further game story progression
- Multiple Save files
- Easy to navigate user interface
- Options for user interface
- Direct communication among players and creators

Key Offerings

We can offer a new level of understanding and growth to users who are unfamiliar with gaming and software engineering.

With object oriented programming, users will feel excited with the amount of quick updates to the story and mechanics due to reusability. The player's needs will be satisfied from feedback directly sent to us, the creators.

Pokémon Text Adventure will allow the player to feel a great amount of nostalgia and at the same time, help to learn a new language.
